## Export GroupWise mailboxes with ease.

When you need a portable snapshot of a complete or partial GroupWise mailbox, perhaps for a user departing, legal discovery or for additional backup, Advansys Archive To Go is the tool to use.

Archive To Go's simple Wizard process makes it easy to save messages, including attachments, into a ready-to-go format complete with viewer. A secure enterprise mode enables Administrators to export any user's mailbox without detection.

Exported messages are faithful representations of the GroupWise original, including:

- All file and embedded message attachments
- Additional GroupWise metadata - message properties, folder, categories, custom fields, ID, save log
- Plain text and HTML representations

Archive To Go offers flexible export options for GroupWise personal archives and shared folders. Convert to Outlook PST files using the **Advansys PST Creator**. Monitor exports by auditing to CSV text file or by using secure real-time integration with **GWAVA Redline** (also integrates with **GWAVA Reveal, Reload, Vertigo**).

## Find information within your archives. Fast.

With the supplied viewer, accessing an Archive To Go mailbox is easy and familiar. Designed to operate similar to the GroupWise client, exported messages can be located quickly in their original folder structure, either manually or via high speed text search. Once the desired message is found, you can preview, open, reply, forward or print it.

Archive To Go is backed by Advansys, a developer with more than 14 years GroupWise experience. For more information and **free** trial software, visit [www.archive2go.com](http://www.archive2go.com).
